## GasGas Pampera 250cc First registered 2014

Wiring diagram - unofficial, to be used entirely at your own risk.

Block 1 from multi switch to loom.

White/blue (connects to orange block 2)

White/black (connects to double white/black block 2)

Block 2 from multi switch

Orange

Single lead output into loom

Block 3 from multi switch

Purple $\times 2$

Block from loom, does not connect to any thing (removed)

Brake switch

Pilot light

Head light

Rear light

Green/yellow (earth)
Brown = feed
Yellow $=$ feed
White to light via main loom

High beam - blue/white
Dip beam - white
Earth - green/yellow

White = stop (connects to red)
Brown = tail (connects to yellow)
Black = earth (connects to black)

Cooling fan DC convertor

Green from thermistor

Yellow

Convertor
Loom from generator

Magneto \& alternator looms.

Ignition control

Voltage regulator - black plastic box - Yellow feed

Multi switch - indicator.

Indicator relay.

Orange - feed out to switch

$\downarrow$
Black - earth (not connected at time of producing this guide otherwise all of the lights and horn cease working)

Indicators
Black - earth
Green = right

Brown $=$ Left

Horn

$$
\begin{gathered}
\text { Yellow }=\text { power } \\
\text { Grey }=\text { earth via multi switch }
\end{gathered}
$$

Brake<br>Yellow to black $=$ feed

White = to light

Instrument panel lights.

Speedo light = small red ?
Indicators = light grey \& light green
Lights on = orange
High beam = white/orange
Black = combination earth

Please note that this is not an official wiring diagram it has been deduced from a 'used' motorcycle of 2014 registration.

The rear light unit is an LED unit and it has had 5A 50V blocking diode inserted.
